

M E N U

01 / Classic Facial

A classic facial for a deep, thorough skin cleaning. We'll prep the skin for an intensive cleansing while keeping skin tissues intact. We'll combine several peeling techniques, depending on the skin's type and condition. Next, we'll massage the skin with ampulla/massage cream and finish with a refreshing, reviving mask for an immediate glow and prolonged hydration.

02 / Glow Treatment

If you have a special occasion coming up, you're due for a photo shoot, or you're just in the mood to look extra glamorous - This treatment is for you. Glow Treatment instantly revives and reinvigorates dull skin, removing dead skin cells and minimizing pores. We'll use gentle peeling, specialty masks and moisturizing formulas. Expect to see radiant, extra-glowy skin.

* It can be combined with radio or ultrasound technologies to maximize the ingredient's benefits and to create a forming effect.

03 / Ultrasound

Ultrasound technology enhances the effectiveness of a classic facial by allowing active ingredients to penetrate deeper layers.

04 / Radio Frequency

A classic facial that incorporates an advanced radio frequency technology, inducing collagen production and firming the skin. Radio Frequency also significantly delays early signs of aging.

05 / Skin Tag, Capillary

An effective, localized treatment for skin tags and rosacea using innovative technology. Skin tags are small growths raised from the skin's surface due to rubbing up against skin or clothes.

Skin tags usually appear on the neck, upper chest, groin, and other body parts. Their presence may cause aesthetic discomfort. In this treatment, we'll safely remove skin tags using advanced technology without any pain or need for a healing process.

06 / Acne

An intensive treatment for reducing acne and skin inflammations.

This facial combines specialized ingredients and medical technologies to mitigate the appearance of spots and post-acne pigmentation. We'll strengthen the skin using antiseptic and anti-inflammatory products, deep-cleanse pores and promote a better-balanced skin with soothing masks.

To achieve a significant change in the skin, we recommend a series of treatments.

07 / ClearSkin Laser

Acne, acne scars and skin texture

Advanced laser technology to treat active acne, soften the appearance of acne scars and improve skin texture.

During the treatment, we'll work within the deeper skin layers using controlled laser energy combined with cooling to help reduce excess sebaceous gland activity and stimulate collagen production and natural skin renewal.

A personalized series of treatments helps reduce acne breakouts, gradually soften the appearance of scars and improve skin texture for a smoother, refreshed complexion.

08 / Micro Plasma

An innovative technology aimed to significantly minimize wrinkles, fine lines and post-acne dark spots, promoting smooth, rejuvenated, radiant skin.

We'll operate from deeper tissues, injecting regulated energy to the desired area without damaging surrounding tissues.

This technology allows the skin to heal and rebuild quickly while simultaneously stimulating new collagen production.

It can also be used to achieve firmer, tighter skin around the eyelids.

09 / ClearLift Laser

Skin rejuvenation and firming

Advanced laser technology to rejuvenate and firm the skin, improve skin texture and soften fine lines and signs of aging.

During the treatment, we'll deliver controlled laser energy into the deeper skin layers to stimulate collagen production and natural renewal processes while preserving the skin's outer layer.

A series of treatments helps achieve smoother, more even-looking and firmer skin.

Suitable for the face, neck and décolleté, with an immediate return to daily activities in most cases.

10 / Skin Rejuvenation

Sun damage, skin disorders, aging and genetic factors create skin imbalances. These later lead to enlarged pores, wrinkles, pigmentation, spots and visible blood vessels.

During Skin Rejuvenation, we'll use advanced technology to restore the upper skin layer (epidermis).

After the treatment, expect visibly smoother skin with fewer pores and dark spots.

Suitable for face, décolleté and hands.

11 / Hair Removal

A groundbreaking hair removal technology that can be used on every complexion, any body area, and any time of the year.

SHR is based on gradual heat, allowing maximum control and no pain. It focuses only on the hair follicle without damaging surrounding tissues. Unlike other hair removal technologies, SHR doesn't involve burn risk and can be used on dark, tanned skin. Also suitable for kids and teenagers.

12 / Stretch Marks

Stretch marks are the most common side-effects of weight gain or weight loss, occurring due to extreme pressure put on the skin as it expands and shrinks. Stretch marks usually appear at puberty and continue to show as our bodies go through more changes (pregnancy, diet, muscle gain etc.).

In this treatment, we'll use advanced technology to generate a skin-tissue rebuilding process. After treatment, expect to see less-apparent, less-dominant stretch marks.

It can be combined with skin-firming ultrasound technology.

13 / Cellulite & Sculpting

Cellulite - accumulated subdermal fat - is among the most common and stubborn skin issues. During this 3-step treatment, we'll use innovative technology to warm up the upper skin layer, inducing robust collagen production.

This will lead to tighter, firmer skin.

Afterward, we'll heat fat tissues to break the connections between fat cells, allowing them to distribute more evenly.

Finally, we'll end with a deep-tissue massage to decongest the transportation system connecting vessels and skin tissues.

* Can be combined with a firming treatment in areas with excess fat tissues.
